EDUCATION

The University of Manchester **Manchester, UK**
MSc Robotics (in progress) Expected Dec 2027

Zhejiang Gongshang University / University of Sussex **Hangzhou, China**
BEng in Electronic Information Engineering (Joint Programme) Sep 2022 – Jul 2026

- University of Sussex: BEng Robotics and Electrical Engineering, First Class Honours.
- Average: 84/100. Courses: Embedded Systems, Mechanics of Mechanisms and Robots, Digital Systems and Microprocessor Design, Electronic Circuit and Systems Design, Systems Analysis and Control.

INTERNSHIP EXPERIENCE

Hangzhou Huayi Technology Co., Ltd. **Hangzhou, China**
Hardware Engineer Intern Jun 2025 – Aug 2025

- Measured internal resistance, connected external loads and calculated theoretical current before powered testing; observed loaded circuit waveforms with an oscilloscope and recorded changes on video.
- Assisted with component heating and temperature-limit tests, recording temperature rise, peak temperature and circuit conduction time across approximately 100 test repetitions.

PROJECTS

Test Rig for Soft Fluidic Actuators **Hangzhou, China**
Individual Undergraduate Dissertation 2025 – 2026

- Designed and built an adjustable rig integrating a fixture, manual pneumatic supply and electronic scale module to test PneuNet and fibre-reinforced actuators.
- Investigated pneumatic leaks and unstable readings from the initial load-cell circuit; simplified connections and revised the sensing arrangement for peak blocked-force measurements.
- Tested each actuator at six injected-air volumes with 3–5 repetitions per level; analysed force–volume trends and standard deviations, recording a highest mean peak blocked force of approximately 0.99 N.

Embedded Systems Project (Elisa-3 Robot) **Hangzhou, China**
Team Leader | Three-person Team Mar 2025 – May 2025

- Programmed line-following and obstacle-avoidance behaviours using Arduino, applying PID control to line-following motion and testing the behaviours on the physical robot.
- Planned milestones, allocated development tasks and coordinated sensor processing, behaviour implementation and code review across the team.

Analogue Circuit Design and Characterisation **Hangzhou, China**
Team Leader | Two-person Team Nov 2024 – Dec 2024

- Designed BJT and operational amplifier circuits to meet specifications; calculated component parameters using datasheets and verified bias, gain and frequency response in Multisim.
- Tested assembled circuits using an oscilloscope and multimeter, investigated polarity and bias faults, and compared theoretical, simulated and measured results.

SKILLS & INTERESTS

Programming and Control: C, Arduino; experience using Python, MATLAB and Simulink; PID control.
Design and Testing: SolidWorks, CAD, Multisim; oscilloscope and multimeter operation; circuit debugging.
Languages: Mandarin (Native), English (IELTS 7.0, November 2024; CET-6).
Interests: Drumming, band performance.
